Kripke Model: Formal Definition

- A Kripke model $\langle S, I, R, AP, L \rangle$ consists of
 - a **finite** set of states S ;
 - a set of **initial** states $I \subseteq S$;
 - a set of **transitions** $R \subseteq S \times S$;
 - a set of **atomic propositions** AP ;
 - a **labeling function** $L : S \mapsto 2^{AP}$.
- We assume **R total**: for every state s , there exists (at least) one state s' s.t. $(s, s') \in R$
- Sometimes we use variables with discrete bounded values $v_i \in \{d_1, \dots, d_k\}$ (can be encoded with $\lceil \log(k) \rceil$ Boolean variables)

Remark

Unlike with other types of Automata (e.g., Buechi), in Kripke models **the values of all variables are always assigned in each state.**

Kripke Model: Formal Definition

Kripke Structures: Two Alternative Representations:

- each state identifies univocally the values of the atomic propositions which hold there
- each state is labeled by a bit vector

Kripke Structures: Two Alternative Representations:

- each state identifies univocally the values of the atomic propositions which hold there
- each state is labeled by a bit vector

Example: a Kripke model for mutual exclusion

N = noncritical, T = trying, C = critical

User 1 User 2

Path in a Kripke Model

A **path** in a Kripke model M is an infinite sequence of states

$$\pi = s_0, s_1, s_2, \dots \in S^\omega$$

such that $s_0 \in I$ and $(s_i, s_{i+1}) \in R$.

A state s is **reachable in M** if there is a path from the initial states to s .

Composing Kripke Models

- Complex Kripke Models are typically obtained by composition of smaller ones
- Components can be combined via
 - **asynchronous** composition.
 - **synchronous** composition,

Asynchronous Composition

- Interleaving of evolution of components.
- At each time instant, one component is selected to perform a transition.

- Typical example: communication protocols.

Asynchronous Composition/Product: formal definition

Asynchronous product of Kripke models

Let $M_1 \stackrel{\text{def}}{=} \langle S_1, I_1, R_1, AP_1, L_1 \rangle$, $M_2 \stackrel{\text{def}}{=} \langle S_2, I_2, R_2, AP_2, L_2 \rangle$. Then the **asynchronous product** $M \stackrel{\text{def}}{=} M_1 || M_2$ is $M \stackrel{\text{def}}{=} \langle S, I, R, AP, L \rangle$, where

- $S \subseteq S_1 \times S_2$ s.t., $\forall \langle s_1, s_2 \rangle \in S$, $\forall I \in AP_1 \cap AP_2$, $I \in L_1(s_1)$ iff $I \in L_2(s_2)$
- $I \subseteq I_1 \times I_2$ s.t. $I \subseteq S$
- $R(\langle s_1, s_2 \rangle, \langle t_1, t_2 \rangle)$ iff $(R_1(s_1, t_1) \text{ and } s_2 = t_2) \text{ or } (s_1 = t_1 \text{ and } R_2(s_2, t_2))$
- $AP = AP_1 \cup AP_2$
- $L : S \mapsto 2^{AP}$ s.t. $L(\langle s_1, s_2 \rangle) \stackrel{\text{def}}{=} L_1(s_1) \cup L_2(s_2)$.

Note: combined states must agree on the values of Boolean variables.

Asynchronous composition is associative:

$$(\dots(M_1 || M_2) || \dots) || M_n = (M_1 || (M_2 || (\dots || M_n) \dots)) = M_1 || M_2 || \dots || M_n$$

Asynchronous Composition/Product: formal definition

Asynchronous product of Kripke models

Let $M_1 \stackrel{\text{def}}{=} \langle S_1, I_1, R_1, AP_1, L_1 \rangle$, $M_2 \stackrel{\text{def}}{=} \langle S_2, I_2, R_2, AP_2, L_2 \rangle$. Then the **asynchronous product** $M \stackrel{\text{def}}{=} M_1 || M_2$ is $M \stackrel{\text{def}}{=} \langle S, I, R, AP, L \rangle$, where

- $S \subseteq S_1 \times S_2$ s.t., $\forall \langle s_1, s_2 \rangle \in S$, $\forall I \in AP_1 \cap AP_2$, $I \in L_1(s_1)$ iff $I \in L_2(s_2)$
- $I \subseteq I_1 \times I_2$ s.t. $I \subseteq S$
- $R(\langle s_1, s_2 \rangle, \langle t_1, t_2 \rangle)$ iff $(R_1(s_1, t_1) \text{ and } s_2 = t_2) \text{ or } (s_1 = t_1 \text{ and } R_2(s_2, t_2))$
- $AP = AP_1 \cup AP_2$
- $L : S \mapsto 2^{AP}$ s.t. $L(\langle s_1, s_2 \rangle) \stackrel{\text{def}}{=} L_1(s_1) \cup L_2(s_2)$.

Note: combined states must agree on the values of Boolean variables.

Asynchronous composition is associative:

$$(\dots(M_1 || M_2) || \dots) || M_n = (M_1 || (M_2 || (\dots || M_n) \dots)) = M_1 || M_2 || \dots || M_n$$

Asynchronous Composition: Example 1

Asynchronous Composition: Example 2

Asynchronous Composition: Example 2

Synchronous Composition

- Components evolve in parallel.
- At each time instant, every component performs a transition.

- Typical example: sequential hardware circuits.

Synchronous Composition/Product: formal definition

Synchronous product of Kripke models

Let $M_1 \stackrel{\text{def}}{=} \langle S_1, I_1, R_1, AP_1, L_1 \rangle$, $M_2 \stackrel{\text{def}}{=} \langle S_2, I_2, R_2, AP_2, L_2 \rangle$. Then the **synchronous product** $M \stackrel{\text{def}}{=} M_1 \times M_2$ is $M \stackrel{\text{def}}{=} \langle S, I, R, AP, L \rangle$, where

- $S \subseteq S_1 \times S_2$ s.t., $\forall \langle s_1, s_2 \rangle \in S, \forall I \in AP_1 \cap AP_2, I \in L_1(s_1)$ iff $I \in L_2(s_2)$
- $I \subseteq I_1 \times I_2$ s.t. $I \subseteq S$
- $R(\langle s_1, s_2 \rangle, \langle t_1, t_2 \rangle)$ iff $(R_1(s_1, t_1) \textbf{ and } R_2(s_2, t_2))$
- $AP = AP_1 \cup AP_2$
- $L : S \mapsto 2^{AP}$ s.t. $L(\langle s_1, s_2 \rangle) \stackrel{\text{def}}{=} L_1(s_1) \cup L_2(s_2)$.

Note: combined states must agree on the values of Boolean variables.

Synchronous composition is associative:

$$(\dots(M_1 \times M_2) \times \dots) \times M_n = (M_1 \times (M_2 \times (\dots \times M_n) \dots)) = M_1 \times M_2 \times \dots \times M_n$$

Synchronous Composition/Product: formal definition

Synchronous product of Kripke models

Let $M_1 \stackrel{\text{def}}{=} \langle S_1, I_1, R_1, AP_1, L_1 \rangle$, $M_2 \stackrel{\text{def}}{=} \langle S_2, I_2, R_2, AP_2, L_2 \rangle$. Then the **synchronous product** $M \stackrel{\text{def}}{=} M_1 \times M_2$ is $M \stackrel{\text{def}}{=} \langle S, I, R, AP, L \rangle$, where

- $S \subseteq S_1 \times S_2$ s.t., $\forall \langle s_1, s_2 \rangle \in S, \forall I \in AP_1 \cap AP_2, I \in L_1(s_1)$ iff $I \in L_2(s_2)$
- $I \subseteq I_1 \times I_2$ s.t. $I \subseteq S$
- $R(\langle s_1, s_2 \rangle, \langle t_1, t_2 \rangle)$ iff $(R_1(s_1, t_1) \text{ and } R_2(s_2, t_2))$
- $AP = AP_1 \cup AP_2$
- $L : S \mapsto 2^{AP}$ s.t. $L(\langle s_1, s_2 \rangle) \stackrel{\text{def}}{=} L_1(s_1) \cup L_2(s_2)$.

Note: combined states must agree on the values of Boolean variables.

Synchronous composition is associative:

$$(\dots(M_1 \times M_2) \times \dots) \times M_n = (M_1 \times (M_2 \times (\dots \times M_n) \dots)) = M_1 \times M_2 \times \dots \times M_n$$

Description languages for Kripke Model

- Most often a Kripke model is not given **explicitly** (states, arcs),...
- ... rather it is usually presented in a **structured language** (e.g., SMV, PROMELA, StateCharts, VHDL, ...)
 - even a piece of SW can be seen as a Kripke model!
- Each component is presented by specifying
 - **state variables**: determine the set of atomic propositions AP , the state space S and the labeling L .
 - **initial values of variables V** : determine the set of initial states I .
 - described as a relation $I(V_0)$ in terms of state variables at step 0
 - **instructions**: determine the transition relation R .
 - described as a relation $R(V, V')$ in terms of current state variables V and next state variables V'
- Aka as **symbolic representation of a Kripke model**

Remark

Typically symbolic description are much more compact (and intuitive) than the explicit representation of the Kripke model.

The SMV language

- The input language of the SMV M.C. (and NuSMV)
- Booleans, enumerative and bounded integers as data types
- now enriched with other constructs, e.g. in NuXMV language
- An SMV program consists of:
 - Declarations of the state variables (e.g., `b0`);
 - Assignments that define the **initial states** (e.g., `init(b0) := 0`).
 - Assignments that define the **transition relation** (e.g., `next(b0) := !b0`).
- Allows for both synchronous and asynchronous composition of modules (though synchronous interaction more natural)

Example: a Simple Counter Circuit

```
MODULE main
```

```
VAR
```

```
  v0      : boolean;  
  v1      : boolean;  
  out     : 0..3;
```

```
ASSIGN
```

```
  init(v0) := 0;  
  next(v0)  := !v0;  
  init(v1)  := 0;  
  next(v1)  := (v0 xor v1);  
  out := toint(v0) + 2*toint(v1);
```

v_1	v_0	v'_1	v'_0
0	0	0	1
0	1	1	0
1	0	1	1
1	1	0	0

Example: a Simple Counter Circuit

```
MODULE main
```

```
VAR
```

```
  v0      : boolean;  
  v1      : boolean;  
  out     : 0..3;
```

```
ASSIGN
```

```
  init(v0) := 0;  
  next(v0) := !v0;  
  init(v1) := 0;  
  next(v1) := (v0 xor v1);  
  out := toint(v0) + 2*toint(v1);
```

v_1	v_0	v'_1	v'_0
0	0	0	1
0	1	1	0
1	0	1	1
1	1	0	0

$$I(V) = (\neg v_0 \wedge \neg v_1)$$

$$R(V, V') = (v'_0 \leftrightarrow \neg v_0) \wedge (v'_1 \leftrightarrow v_0 \oplus v_1)$$

Standard Programming Languages

- Standard programming languages are typically sequential

⇒ Transition relation defined in terms also of the **program counter**

- Numbers & values Booleanized

```
...  
10. i = 0;  
11. acc = 0.0;  
12. while (i < dim) {  
13.     acc += V[i];  
14.     i++;  
15. }  
...
```

```
....  
(pc = 10) → ((i' = 0) ∧ (pc' = 11))  
(pc = 11) → ((acc' = 0.0) ∧ (pc' = 12))  
(pc = 12) → ((i < dim) → (pc' = 13))  
(pc = 12) → (¬(i < dim) → (pc' = 16))  
(pc = 13) → ((acc' = acc + read(V, i)) ∧ (pc' = 14))  
(pc = 14) → (i' = i + 1) ∧ (pc' = 15))  
(pc = 15) → (pc' = 12))  
...
```

Standard Programming Languages

- Standard programming languages are typically sequential

⇒ Transition relation defined in terms also of the **program counter**

- Numbers & values Booleanized

```
...  
10. i = 0;  
11. acc = 0.0;  
12. while (i < dim) {  
13.     acc += V[i];  
14.     i++;  
15. }  
...
```

```
....  
(pc = 10) → ((i' = 0) ∧ (pc' = 11))  
(pc = 11) → ((acc' = 0.0) ∧ (pc' = 12))  
(pc = 12) → ((i < dim) → (pc' = 13))

Safety Properties

- Bad events never happen
 - deadlock: two processes waiting for input from each other, the system is unable to perform a transition.
 - no reachable state satisfies a “bad” condition, e.g. never two processes in critical section at the same time
- Can be refuted by a **finite** behaviour
- Ex.: it is never the case that p .

Linear Temporal Logic (LTL): Syntax

- An **atomic proposition** is a LTL formula;
- if φ_1 and φ_2 are LTL formulae, then $\neg\varphi_1$, $\varphi_1 \wedge \varphi_2$, $\varphi_1 \vee \varphi_2$, $\varphi_1 \rightarrow \varphi_2$, $\varphi_1 \leftrightarrow \varphi_2$, $\varphi_1 \oplus \varphi_2$ are LTL formulae;
- if φ_1 and φ_2 are LTL formulae, then **X** φ_1 , **G** φ_1 , **F** φ_1 , φ_1 **U** φ_2 are LTL formulae, where **X**, **G**, **F**, **U** are the “next”, “globally”, “eventually”, “until” temporal operators respectively.
- Another operator **R** “releases” (the dual of **U**) is used sometimes.

Linear Temporal Logic (LTL): Syntax

- An **atomic proposition** is a LTL formula;
- if φ_1 and φ_2 are LTL formulae, then $\neg\varphi_1$, $\varphi_1 \wedge \varphi_2$, $\varphi_1 \vee \varphi_2$, $\varphi_1 \rightarrow \varphi_2$, $\varphi_1 \leftrightarrow \varphi_2$, $\varphi_1 \oplus \varphi_2$ are LTL formulae;
- if φ_1 and φ_2 are LTL formulae, then $\mathbf{X}\varphi_1$, $\mathbf{G}\varphi_1$, $\mathbf{F}\varphi_1$, $\varphi_1 \mathbf{U} \varphi_2$ are LTL formulae, where $\mathbf{X}$, $\mathbf{G}$, $\mathbf{F}$, $\mathbf{U}$ are the “next”, “globally”, “eventually”, “until” temporal operators respectively.
- Another operator $\mathbf{R}$ “releases” (the dual of $\mathbf{U}$) is used sometimes.

Linear Temporal Logic (LTL): Syntax

- Another operator **R** “releases” (the dual of **U**) is used sometimes.

LTL semantics: intuitions

LTL is given by the standard boolean logic enhanced with the following **temporal operators**, which operate through **paths** $\langle s_0, s_1, \dots, s_k, \dots \rangle$:

- “**Next**” **X**: $\mathbf{X}\varphi$ is true in s_t iff φ is true in s_{t+1}
 - “**Finally**” (or “eventually”) **F**: $\mathbf{F}\varphi$ is true in s_t iff φ is true in **some** $s_{t'}$ with $t' \geq t$
 - “**Globally**” (or “henceforth”) **G**: $\mathbf{G}\varphi$ is true in s_t iff φ is true in **all** $s_{t'}$ with $t' \geq t$
 - “**Until**” **U**: $\varphi \mathbf{U} \psi$ is true in s_t iff, for some state $s_{t'}$ s.t. $t' \geq t$:
 - ψ is true in $s_{t'}$ **and**
 - φ is true in all states $s_{t''}$ s.t. $t \leq t'' < t'$
 - “**Releases**” **R**: $\varphi \mathbf{R} \psi$ is true in s_t iff, for all states $s_{t'}$ s.t. $t' \geq t$:
 - ψ is true **or**
 - φ is true in some states $s_{t''}$ with $t \leq t'' < t'$
- “ ψ can become false only if φ becomes true first”

LTL semantics: intuitions

finally P

$F P$

globally P

$G P$

$X P$

P until q

$P U q$

LTL: Some Noteworthy Examples

- **Safety:** “it never happens that a train is arriving and the bar is up”

$$\mathbf{G}(\neg(\text{train_arriving} \wedge \text{bar_up}))$$

- **Liveness:** “if input, then eventually output”

$$\mathbf{G}(\text{input} \rightarrow \mathbf{F}\text{output})$$

- **Releases:** “the device is not working if you don’t first repair it”

$$(\text{repair_device} \mathbf{R} \neg\text{working_device})$$

- **Fairness:** “infinitely often send ”

$$\mathbf{GF}\text{send}$$

- **Strong fairness:** “infinitely often send implies infinitely often recv.”

$$\mathbf{GF}\text{send} \rightarrow \mathbf{GF}\text{recv}$$

LTL Formal Semantics

$\pi, s_i \models a$	iff	$a \in L(s_i)$	
$\pi, s_i \models \neg\varphi$	iff	$\pi, s_i \not\models \varphi$	
$\pi, s_i \models \varphi \wedge \psi$	iff	$\pi, s_i \models \varphi$ <i>and</i> $\pi, s_i \models \psi$	
$\pi, s_i \models \mathbf{X}\varphi$	iff	$\pi, s_{i+1} \models \varphi$	
$\pi, s_i \models \mathbf{F}\varphi$	iff	<i>for some</i> $j \geq i : \pi, s_j \models \varphi$	
$\pi, s_i \models \mathbf{G}\varphi$	iff	<i>for all</i> $j \geq i : \pi, s_j \models \varphi$	
$\pi, s_i \models \varphi \mathbf{U} \psi$	iff	<i>for some</i> $j \geq i : (\pi, s_j \models \psi$ <i>and</i> <i>for all</i> k s.t. $i \leq k < j : \pi, s_k \models \varphi)$	
$\pi, s_i \models \varphi \mathbf{R} \psi$	iff	<i>for all</i> $j \geq i : (\pi, s_j \models \psi$ <i>or</i> <i>for some</i> k s.t. $i \leq k < j : \pi, s_k \models \varphi)$	

LTL Formal Semantics (cont.)

- LTL properties are evaluated over paths, i.e., over infinite, linear sequences of states:
 $\pi = s_0 \rightarrow s_1 \rightarrow \dots \rightarrow s_t \rightarrow s_{t+1} \rightarrow \dots$
- Given an infinite sequence $\pi = s_0, s_1, s_2, \dots$
 - $\pi, s_i \models \phi$ if ϕ is true in state s_i of π .
 - $\pi \models \phi$ if ϕ is true in the initial state s_0 of π .
- The LTL model checking problem $\mathcal{M} \models \phi$
 - check if $\pi \models \phi$ for every path π of the Kripke structure $\mathcal{M}$ (e.g., $\phi = \mathbf{F}done$)

LTL Formal Semantics (cont.)

- LTL properties are evaluated over paths, i.e., over infinite, linear sequences of states:
 $\pi = s_0 \rightarrow s_1 \rightarrow \dots \rightarrow s_t \rightarrow s_{t+1} \rightarrow \dots$
- Given an infinite sequence $\pi = s_0, s_1, s_2, \dots$
 - $\pi, s_i \models \phi$ if ϕ is true in state s_i of π .
 - $\pi \models \phi$ if ϕ is true in the initial state s_0 of π .
- The LTL model checking problem $\mathcal{M} \models \phi$
 - check if $\pi \models \phi$ for every path π of the Kripke structure $\mathcal{M}$ (e.g., $\phi = \mathbf{F}done$)

LTL Formal Semantics (cont.)

- LTL properties are evaluated over paths, i.e., over infinite, linear sequences of states:

$$\pi = s_0 \rightarrow s_1 \rightarrow \dots \rightarrow s_t \rightarrow s_{t+1} \rightarrow \dots$$

- Given an infinite sequence $\pi = s_0, s_1, s_2, \dots$

- $\pi, s_i \models \phi$ if ϕ is true in state s_i of π .
- $\pi \models \phi$ if ϕ is true in the initial state s_0 of π .

- The LTL model checking problem $\mathcal{M} \models \phi$

- check if $\pi \models \phi$ for every path π of the Kripke structure $\mathcal{M}$ (e.g., $\phi = \mathbf{F}done$)

The LTL model checking problem $\mathcal{M} \models \phi$: remark

The LTL model checking problem $\mathcal{M} \models \phi$

$\pi \models \phi$ **for every path** π of the Kripke structure $\mathcal{M}$

Important Remark

$\mathcal{M} \not\models \phi \not\Rightarrow \mathcal{M} \models \neg\phi$ (!!)

- E.g. if ϕ is a LTL formula and two paths π_1 and π_2 are s.t. $\pi_1 \models \phi$ and $\pi_2 \models \neg\phi$.

The LTL model checking problem $\mathcal{M} \models \phi$: remark

The LTL model checking problem $\mathcal{M} \models \phi$

$\pi \models \phi$ for every path π of the Kripke structure $\mathcal{M}$

Important Remark

$\mathcal{M} \not\models \phi \not\Rightarrow \mathcal{M} \models \neg\phi$ (!!)

- E.g. if ϕ is a LTL formula and two paths π_1 and π_2 are s.t. $\pi_1 \models \phi$ and $\pi_2 \models \neg\phi$.

The LTL model checking problem $\mathcal{M} \models \phi$: remark

The LTL model checking problem $\mathcal{M} \models \phi$

$\pi \models \phi$ for every path π of the Kripke structure $\mathcal{M}$

Important Remark

$\mathcal{M} \not\models \phi \not\Rightarrow \mathcal{M} \models \neg\phi$ (!!)

- E.g. if ϕ is a LTL formula and two paths π_1 and π_2 are s.t. $\pi_1 \models \phi$ and $\pi_2 \models \neg\phi$.

Example: $\mathcal{M} \not\models \phi \not\Rightarrow \mathcal{M} \models \neg\phi$

Let $\pi_1 \stackrel{\text{def}}{=} \{s_1\}^\omega$, $\pi_2 \stackrel{\text{def}}{=} \{s_2\}^\omega$.

- $\mathcal{M} \not\models \mathbf{G}p$, in fact:

- $\pi_1 \not\models \mathbf{G}p$
- $\pi_2 \models \mathbf{G}p$

- $\mathcal{M} \not\models \neg\mathbf{G}p$, in fact:

- $\pi_1 \models \neg\mathbf{G}p$
- $\pi_2 \not\models \neg\mathbf{G}p$

Syntactic properties of LTL operators

$$\varphi_1 \vee \varphi_2 \iff \neg(\neg\varphi_1 \wedge \neg\varphi_2)$$

...

$$\mathbf{F} \varphi_1 \iff \top \mathbf{U} \varphi_1$$

$$\mathbf{G} \varphi_1 \iff \perp \mathbf{R} \varphi_1$$

$$\mathbf{F} \varphi_1 \iff \neg \mathbf{G} \neg \varphi_1$$

$$\mathbf{G} \varphi_1 \iff \neg \mathbf{F} \neg \varphi_1$$

$$\neg \mathbf{X} \varphi_1 \iff \mathbf{X} \neg \varphi_1$$

$$\varphi_1 \mathbf{R} \varphi_2 \iff \neg(\neg\varphi_1 \mathbf{U} \neg\varphi_2)$$

$$\varphi_1 \mathbf{U} \varphi_2 \iff \neg(\neg\varphi_1 \mathbf{R} \neg\varphi_2)$$

Note

LTL can be defined in terms of $\wedge$, $\neg$, $\mathbf{X}$, $\mathbf{U}$ only

Exercise

Prove that $\varphi_1 \mathbf{R} \varphi_2 \iff \mathbf{G} \varphi_2 \vee \varphi_2 \mathbf{U} (\varphi_1 \wedge \varphi_2)$

Syntactic properties of LTL operators

$$\varphi_1 \vee \varphi_2 \iff \neg(\neg\varphi_1 \wedge \neg\varphi_2)$$

...

$$\mathbf{F} \varphi_1 \iff \top \mathbf{U} \varphi_1$$

$$\mathbf{G} \varphi_1 \iff \perp \mathbf{R} \varphi_1$$

$$\mathbf{F} \varphi_1 \iff \neg \mathbf{G} \neg \varphi_1$$

$$\mathbf{G} \varphi_1 \iff \neg \mathbf{F} \neg \varphi_1$$

$$\neg \mathbf{X} \varphi_1 \iff \mathbf{X} \neg \varphi_1$$

$$\varphi_1 \mathbf{R} \varphi_2 \iff \neg(\neg\varphi_1 \mathbf{U} \neg\varphi_2)$$

$$\varphi_1 \mathbf{U} \varphi_2 \iff \neg(\neg\varphi_1 \mathbf{R} \neg\varphi_2)$$

Note

Syntactic properties of LTL operators

$$\varphi_1 \vee \varphi_2 \iff \neg(\neg\varphi_1 \wedge \neg\varphi_2)$$

...

$$\mathbf{F}\varphi_1 \iff \mathbf{T}\mathbf{U}\varphi_1$$

$$\mathbf{G}\varphi_1 \iff \perp \mathbf{R}\varphi_1$$

$$\mathbf{F}\varphi_1 \iff \neg\mathbf{G}\neg\varphi_1$$

$$\mathbf{G}\varphi_1 \iff \neg\mathbf{F}\neg\varphi_1$$

$$\neg\mathbf{X}\varphi_1 \iff \mathbf{X}\neg\varphi_1$$

$$\varphi_1 \mathbf{R}\varphi_2 \iff \neg(\neg\varphi_1 \mathbf{U}\neg\varphi_2)$$

$$\varphi_1 \mathbf{U}\varphi_2 \iff \neg(\neg\varphi_1 \mathbf{R}\neg\varphi_2)$$

Note

LTL can be defined in terms of $\wedge$, $\neg$, $\mathbf{X}$, $\mathbf{U}$ only

Exercise

Prove that $\varphi_1 \mathbf{R}\varphi_2 \iff \mathbf{G}\varphi_2 \vee \varphi_2 \mathbf{U}(\varphi_1 \wedge \varphi_2)$

Proof of $\varphi R\psi \Leftrightarrow (\mathbf{G}\psi \vee \psi \mathbf{U}(\varphi \wedge \psi))$

[Solution proposed by the student Samuel Valentini, 2016]

(All state indexes below are implicitly assumed to be ≥ 0 .)

$\Rightarrow$: Let π be s.t. $\pi, s_0 \models \varphi R\psi$

- If $\forall j, \pi, s_j \models \psi$, then $\pi, s_0 \models \mathbf{G}\psi$.
- Otherwise, let s_k be the **first** state s.t. $\pi, s_k \not\models \psi$.
- Since $\pi, s_0 \models \varphi R\psi$, then $k > 0$ and exists $k' < k$ s.t. $\pi, s_{k'} \models \varphi$
- By construction, $\pi, s_{k'} \models \varphi \wedge \psi$ and, for every $w < k'$, $\pi, s_w \models \psi$, so that $\pi, s_0 \models \psi \mathbf{U}(\varphi \wedge \psi)$.
- Thus, $\pi, s_0 \models \mathbf{G}\psi \vee \psi \mathbf{U}(\varphi \wedge \psi)$

$\Leftarrow$: Let π be s.t. $\pi, s_0 \models \mathbf{G}\psi \vee \psi \mathbf{U}(\varphi \wedge \psi)$

- If $\pi, s_0 \models \mathbf{G}\psi$, then $\forall j, \pi, s_j \models \psi$, so that $\pi, s_0 \models \varphi R\psi$.
- Otherwise, $\pi, s_0 \models \psi \mathbf{U}(\varphi \wedge \psi)$.
- Let s_k be the **first** state s.t. $\pi, s_k \not\models \psi$.
- by construction, $\exists k'$ such that $\pi, s_{k'} \models \varphi \wedge \psi$
- by the definition of k , we have that $k' < k$ and $\forall w < k, \pi, s_w \models \psi$.
- Thus $\pi, s_0 \models \varphi R\psi$

Strength of LTL operators

- $\mathbf{G}\varphi \models \varphi \models \mathbf{F}\varphi$
- $\mathbf{G}\varphi \models \mathbf{X}\varphi \models \mathbf{F}\varphi$
- $\mathbf{G}\varphi \models \mathbf{XX}\dots\mathbf{X}\varphi \models \mathbf{F}\varphi$
- $\varphi \mathbf{U}\psi \models \mathbf{F}\psi$
- $\mathbf{G}\psi \models \varphi \mathbf{R}\psi$

LTL tableaux rules

- We say that a temporal subformula **occurs at top level in** φ if it occurs in φ under the scope of no temporal operator
- Let φ_1 and φ_2 be LTL formulae:

$$\begin{aligned}\mathbf{F}\varphi_1 &\iff (\varphi_1 \vee \mathbf{X}\mathbf{F}\varphi_1) \\ \mathbf{G}\varphi_1 &\iff (\varphi_1 \wedge \mathbf{X}\mathbf{G}\varphi_1) \\ \varphi_1 \mathbf{U} \varphi_2 &\iff (\varphi_2 \vee (\varphi_1 \wedge \mathbf{X}(\varphi_1 \mathbf{U} \varphi_2))) \\ \varphi_1 \mathbf{R} \varphi_2 &\iff (\varphi_2 \wedge (\varphi_1 \vee \mathbf{X}(\varphi_1 \mathbf{R} \varphi_2)))\end{aligned}$$

- If applied to all top-level temporal subformulas in φ , rewrite φ into a Boolean combination of atomic and $\mathbf{X}$ -formulas:

$$(p \mathbf{U} q) \wedge (\mathbf{G} \neg p) \implies (q \vee (p \wedge \mathbf{X}(p \mathbf{U} q))) \wedge (\neg p \wedge \mathbf{X} \mathbf{G} \neg p)$$

- atomic subformulas: what holds in current state
- $\mathbf{X}$ -subformulas: obligations for next states

Tableaux Rules: a Quote

*"After all... tomorrow is another day."
[Scarlett O'Hara, "Gone with the Wind"]*

Example 1: mutual exclusion (safety)

$$M \models \mathbf{G} \neg (C_1 \wedge C_2) ?$$

Example 1: mutual exclusion (safety)

$$M \models \mathbf{G} \neg (C_1 \wedge C_2) ?$$

YES: There is no reachable state in which $(C_1 \wedge C_2)$ holds!

Example 2: liveness

$M \models FC_1 ?$

Example 2: liveness

$M \models FC_1 ?$

NO: there is an infinite cyclic solution in which C_1 never holds!

Example 3: liveness

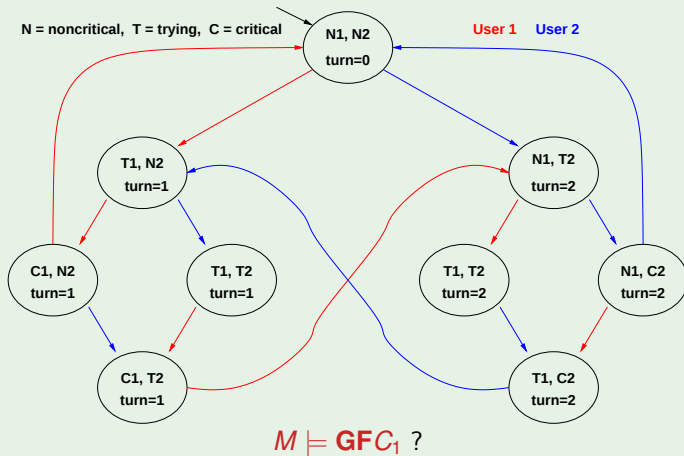

Example 3: liveness

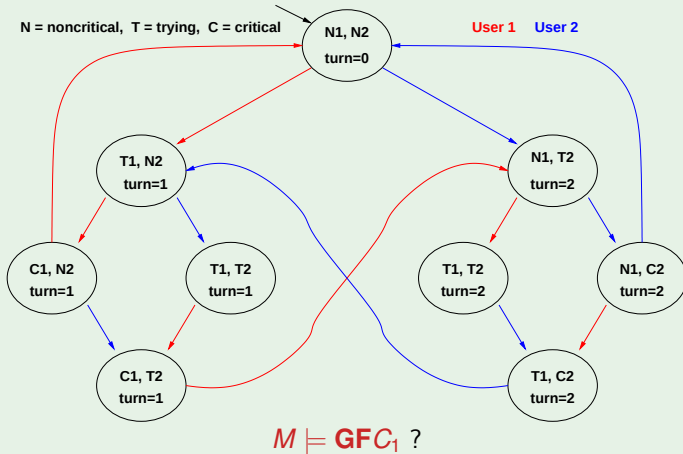

$$M \models \mathbf{G}(T_1 \rightarrow \mathbf{F}C_1) ?$$

YES: every path starting from each state where T_1 holds passes through a state where C_1 holds.

Example 4: fairness

Example 4: fairness

NO: e.g., in the initial state, there is an infinite cyclic solution in which C_1 never holds!

Example 5: strong fairness

Example 5: strong fairness

$$M \models \mathbf{GFT}_1 \rightarrow \mathbf{GFC}_1 ?$$

YES: every path which visits T_1 infinitely often also visits C_1 infinitely often (see liveness property of previous example).

Example 6: blocking

$$M \models G(N_1 \rightarrow F T_1) ?$$

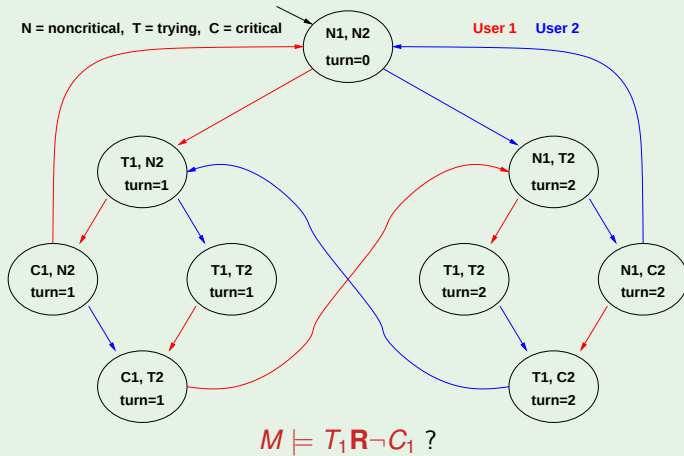

Example 6: blocking

$$M \models G(N_1 \rightarrow F T_1) ?$$

NO: e.g., in the initial state, there is an infinite cyclic solution in which N_1 holds and T_1 never holds!

Example 7: Releases

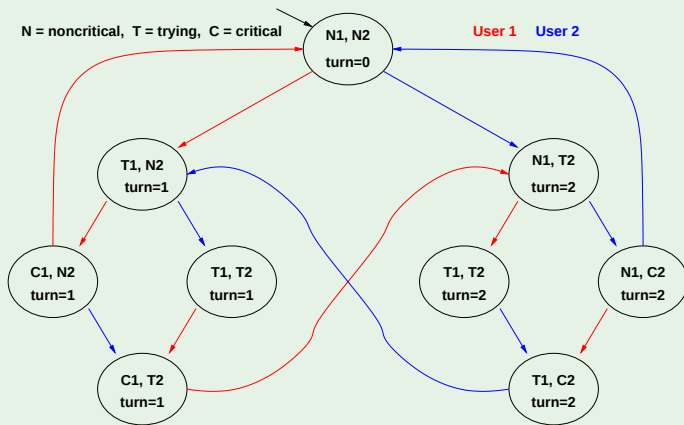

Example 7: Releases

$M \models T_1 R \neg C_1 ?$

YES: C_1 occurs in paths only strictly after T_1 has occurred.

Example 8: **XF**

$M \models \mathbf{XF}(\text{turn} = 0) ?$

Example 8: **XF**

$M \models \mathbf{XF}(\text{turn} = 0) ?$

NO: a counter-example is the ∞ -shaped loop:

$(N1, N2), \{(T1, N2), (C1, N2), (C1, T2), (N1, T2), (N1, C2), (T1, C2)\}^\omega$

Example 9: *Boolean*

$M \models ((turn = 1) \rightarrow N2) ?$

Example 9: *Boolean*

$M \models ((turn = 1) \rightarrow N2) ?$

YES: in the initial state, the formula holds.

Exercise: $\mathbf{G}(T \rightarrow \mathbf{FC})$ vs. $\mathbf{GFT} \rightarrow \mathbf{GFC}$

- Prove that $\mathbf{G}(T \rightarrow \mathbf{FC}) \implies \mathbf{GFT} \rightarrow \mathbf{GFC}$, or produce a counterexample
- Prove that $\mathbf{GFT} \rightarrow \mathbf{GFC} \implies \mathbf{G}(T \rightarrow \mathbf{FC})$, or produce a counterexample

Exercise: $\mathbf{G}(T \rightarrow \mathbf{FC})$ vs. $\mathbf{GFT} \rightarrow \mathbf{GFC}$

- Prove that $\mathbf{G}(T \rightarrow \mathbf{FC}) \implies \mathbf{GFT} \rightarrow \mathbf{GFC}$, or produce a counterexample
- Prove that $\mathbf{GFT} \rightarrow \mathbf{GFC} \implies \mathbf{G}(T \rightarrow \mathbf{FC})$, or produce a counterexample

Example: $\mathbf{G}(T \rightarrow \mathbf{FC})$ vs. $\mathbf{GFT} \rightarrow \mathbf{GFC}$

- $\mathbf{G}(T \rightarrow \mathbf{FC}) \implies \mathbf{GFT} \rightarrow \mathbf{GFC}$?
- YES: if $M \models \mathbf{G}(T \rightarrow \mathbf{FC})$, then $M \models \mathbf{GFT} \rightarrow \mathbf{GFC}$!
- let $M \models \mathbf{G}(T \rightarrow \mathbf{FC})$.

let $\pi \in M$ s.t. $\pi \models \mathbf{GFT}$

$\implies \pi, s_i \models \mathbf{FT}$ for each $s_j \in \pi$

$\implies \pi, s_j \models T$ for each $s_j \in \pi$ and for some $s_j \in \pi$ s.t. $j \geq i$

$\implies \pi, s_j \models \mathbf{FC}$ for each $s_j \in \pi$ and for some $s_j \in \pi$ s.t. $j \geq i$

$\implies \pi, s_k \models C$ for each $s_j \in \pi$, for some $s_j \in \pi$ s.t. $j \geq i$ and for some $k \geq j$

$\implies \pi, s_k \models C$ for each $s_j \in \pi$ and for some $k \geq i$

$\implies \pi \models \mathbf{GFC}$

$\implies M \models \mathbf{GFT} \rightarrow \mathbf{GFC}$.

Example: $\mathbf{G}(T \rightarrow \mathbf{FC})$ vs. $\mathbf{GFT} \rightarrow \mathbf{GFC}$

- $\mathbf{G}(T \rightarrow \mathbf{FC}) \implies \mathbf{GFT} \rightarrow \mathbf{GFC}$?
- YES: if $M \models \mathbf{G}(T \rightarrow \mathbf{FC})$, then $M \models \mathbf{GFT} \rightarrow \mathbf{GFC}$!
- let $M \models \mathbf{G}(T \rightarrow \mathbf{FC})$.

let $\pi \in M$ s.t. $\pi \models \mathbf{GFT}$

$\implies \pi, s_i \models \mathbf{FT}$ for each $s_j \in \pi$

$\implies \pi, s_j \models T$ for each $s_j \in \pi$ and for some $s_j \in \pi$ s.t. $j \geq i$

$\implies \pi, s_j \models \mathbf{FC}$ for each $s_j \in \pi$ and for some $s_j \in \pi$ s.t. $j \geq i$

$\implies \pi, s_k \models C$ for each $s_j \in \pi$, for some $s_j \in \pi$ s.t. $j \geq i$ and for some $k \geq j$

$\implies \pi, s_k \models C$ for each $s_j \in \pi$ and for some $k \geq i$

$\implies \pi \models \mathbf{GFC}$

$\implies M \models \mathbf{GFT} \rightarrow \mathbf{GFC}$.

Example: $\mathbf{G}(T \rightarrow \mathbf{FC})$ vs. $\mathbf{GFT} \rightarrow \mathbf{GFC}$

- $\mathbf{G}(T \rightarrow \mathbf{FC}) \implies \mathbf{GFT} \rightarrow \mathbf{GFC}$?
- YES: if $M \models \mathbf{G}(T \rightarrow \mathbf{FC})$, then $M \models \mathbf{GFT} \rightarrow \mathbf{GFC}$!
- let $M \models \mathbf{G}(T \rightarrow \mathbf{FC})$.

let $\pi \in M$ s.t. $\pi \models \mathbf{GFT}$

$\implies \pi, s_i \models \mathbf{FT}$ for each $s_i \in \pi$

$\implies \pi, s_j \models T$ for each $s_i \in \pi$ and for some $s_j \in \pi$ s.t. $j \geq i$

$\implies \pi, s_j \models \mathbf{FC}$ for each $s_i \in \pi$ and for some $s_j \in \pi$ s.t. $j \geq i$

$\implies \pi, s_k \models C$ for each $s_i \in \pi$, for some $s_j \in \pi$ s.t. $j \geq i$ and for some $k \geq j$

$\implies \pi, s_k \models C$ for each $s_i \in \pi$ and for some $k \geq i$

$\implies \pi \models \mathbf{GFC}$

$\implies M \models \mathbf{GFT} \rightarrow \mathbf{GFC}$.

Example: $\mathbf{G}(T \rightarrow \mathbf{FC})$ vs. $\mathbf{GFT} \rightarrow \mathbf{GFC}$

- $\mathbf{G}(T \rightarrow \mathbf{FC}) \implies \mathbf{GFT} \rightarrow \mathbf{GFC}$?
- YES: if $M \models \mathbf{G}(T \rightarrow \mathbf{FC})$, then $M \models \mathbf{GFT} \rightarrow \mathbf{GFC}$!
- let $M \models \mathbf{G}(T \rightarrow \mathbf{FC})$.
let $\pi \in M$ s.t. $\pi \models \mathbf{GFT}$
 - $\implies \pi, s_i \models \mathbf{FT}$ for each $s_i \in \pi$
 - $\implies \pi, s_j \models T$ for each $s_i \in \pi$ and for some $s_j \in \pi$ s.t. $j \geq i$
 - $\implies \pi, s_j \models \mathbf{FC}$ for each $s_i \in \pi$ and for some $s_j \in \pi$ s.t. $j \geq i$
 - $\implies \pi, s_k \models C$ for each $s_i \in \pi$, for some $s_j \in \pi$ s.t. $j \geq i$ and for some $k \geq j$
 - $\implies \pi, s_k \models C$ for each $s_i \in \pi$ and for some $k \geq i$
 - $\implies \pi \models \mathbf{GFC}$
 - $\implies M \models \mathbf{GFT} \rightarrow \mathbf{GFC}$.

Example: $\mathbf{G}(T \rightarrow \mathbf{FC})$ vs. $\mathbf{GFT} \rightarrow \mathbf{GFC}$

- $\mathbf{G}(T \rightarrow \mathbf{FC}) \implies \mathbf{GFT} \rightarrow \mathbf{GFC}$?
- YES: if $M \models \mathbf{G}(T \rightarrow \mathbf{FC})$, then $M \models \mathbf{GFT} \rightarrow \mathbf{GFC}$!

 - $\implies \pi, s_j \models T$ for each $s_i \in \pi$ and for some $s_j \in \pi$ s.t. $j \geq i$
 - $\implies \pi, s_j \models \mathbf{FC}$ for each $s_i \in \pi$ and for some $s_j \in \pi$ s.t. $j \geq i$
 - $\implies \pi, s_k \models C$ for each $s_i \in \pi$, for some $s_j \in \pi$ s.t. $j \geq i$ and for some $k \geq j$
 - $\implies \pi, s_k \models C$ for each $s_i \in \pi$ and for some $k \geq i$
 - $\implies \pi \models \mathbf{GFC}$
 - $\implies M \models \mathbf{GFT} \rightarrow \mathbf{GFC}$.

Example: $\mathbf{G}(T \rightarrow \mathbf{FC})$ vs. $\mathbf{GFT} \rightarrow \mathbf{GFC}$

- $\mathbf{G}(T \rightarrow \mathbf{FC}) \iff \mathbf{GFT} \rightarrow \mathbf{GFC} ?$

- NO!.

- Counter example:

- $\mathbf{GFT} \rightarrow \mathbf{GFC}$ is satisfied

- $\mathbf{G}(T \rightarrow \mathbf{FC})$ is not satisfied

(Counter-example proposed by the student Vaishak Belle, 2008)

Example: $\mathbf{G}(T \rightarrow \mathbf{FC})$ vs. $\mathbf{GFT} \rightarrow \mathbf{GFC}$

- $\mathbf{G}(T \rightarrow \mathbf{FC}) \iff \mathbf{GFT} \rightarrow \mathbf{GFC} ?$
- NO!.
- Counter example:

- $\mathbf{GFT} \rightarrow \mathbf{GFC}$ is satisfied
- $\mathbf{G}(T \rightarrow \mathbf{FC})$ is not satisfied

(Counter-example proposed by the student Vaishak Belle, 2008)

Example: $\mathbf{G}(T \rightarrow \mathbf{FC})$ vs. $\mathbf{G}T \rightarrow \mathbf{GFC}$

- $\mathbf{G}(T \rightarrow \mathbf{FC}) \iff \mathbf{G}T \rightarrow \mathbf{GFC} ?$
- NO!.
- Counter example:

- $\mathbf{G}T \rightarrow \mathbf{GFC}$ is satisfied
- $\mathbf{G}(T \rightarrow \mathbf{FC})$ is not satisfied

(Counter-example proposed by the student Vaishak Belle, 2008)

(**$E(\varphi_1 R \varphi_2)$** and **$A(\varphi_1 R \varphi_2)$** never used in practice.)

CTL semantics: intuitions

CTL is given by the standard boolean logic enhanced with the operators **AX**, **AG**, **AF**, **AU**, **EX**, **EG**, **EF**, **EU**:

- “Necessarily Next” **AX**: **AX** φ is true in s_t iff φ is true in every successor state s_{t+1}
- “Possibly Next” **EX**: **EX** φ is true in s_t iff φ is true in one successor state s_{t+1}
- “Necessarily in the future” (or “Inevitably”) **AF**: **AF** φ is true in s_t iff φ is inevitably true in **some** $s_{t'}$ with $t' \geq t$
- “Possibly in the future” (or “Possibly”) **EF**: **EF** φ is true in s_t iff φ may be true in **some** $s_{t'}$ with $t' \geq t$

CTL semantics: intuitions [cont.]

- “Globally” (or “always”) **AG**: **AG** φ is true in s_t iff φ is true in **all** $s_{t'}$ with $t' \geq t$
- “Possibly henceforth” **EG**: **EG** φ is true in s_t iff φ is possibly true henceforth
- “Necessarily Until” **AU**: **A**(φ **U** ψ) is true in s_t iff necessarily φ holds until ψ holds.
- “Possibly Until” **EU**: **E**(φ **U** ψ) is true in s_t iff possibly φ holds until ψ holds.

CTL Formal Semantics

Let $(s_i, s_{i+1}, \dots)$ be a path outgoing from state s_i in M

$M, s_i \models a$ iff $a \in L(s_i)$

$M, s_i \models \neg\varphi$ iff $M, s_i \not\models \varphi$

$M, s_i \models \varphi \vee \psi$ iff $M, s_i \models \varphi$ or $M, s_i \models \psi$

$M, s_i \models AX\varphi$ iff for all $(s_i, s_{i+1}, \dots)$,

$M, s_{i+1} \models \varphi$

$M, s_i \models EX\varphi$ iff for some $(s_i, s_{i+1}, \dots)$,

$M, s_{i+1} \models \varphi$

$M, s_i \models AG\varphi$ iff for all $(s_i, s_{i+1}, \dots)$,

for all $j \geq i. M, s_j \models \varphi$

$M, s_i \models EG\varphi$ iff for some $(s_i, s_{i+1}, \dots)$,

for all $j \geq i. M, s_j \models \varphi$

$M, s_i \models AF\varphi$ iff for all $(s_i, s_{i+1}, \dots)$,

for some $j \geq i. M, s_j \models \varphi$

$M, s_i \models EF\varphi$ iff for some $(s_i, s_{i+1}, \dots)$,

for some $j \geq i. M, s_j \models \varphi$

$M, s_i \models A(\varphi U\psi)$ iff for all $(s_i, s_{i+1}, \dots)$,

for some $j \geq i.$
 $(M, s_j \models \psi$ and
 forall k s.t. $i \leq k < j. M, s_k \models \varphi)$

$M, s_i \models E(\varphi U\psi)$ iff for some $(s_i, s_{i+1}, \dots)$,

for some $j \geq i.$
 $(M, s_j \models \psi$ and
 forall k s.t. $i \leq k < j. M, s_k \models \varphi)$

Formal Semantics (cont.)

- CTL properties (e.g. **AF***done*) are evaluated over trees.

- Every temporal operator (**F**, **G**, **X**, **U**) is preceded by a **path quantifier** (**A** or **E**).
- Universal modalities** (**AF**, **AG**, **AX**, **AU**): the temporal formula is true in **all** the paths starting in the current state.
- Existential modalities** (**EF**, **EG**, **EX**, **EU**): the temporal formula is true in **some** path starting in the current state.

The CTL model checking problem $\mathcal{M} \models \phi$

The CTL model checking problem $\mathcal{M} \models \phi$

$\mathcal{M}, s \models \phi$ for every initial state $s \in I$ of the Kripke structure

Important Remark

$\mathcal{M} \not\models \phi \not\Rightarrow \mathcal{M} \models \neg\phi$ (!!)

- E.g. if ϕ is a universal formula $A\dots$ and two initial states s_0, s_1 are s.t. $\mathcal{M}, s_0 \models \phi$ and $\mathcal{M}, s_1 \not\models \phi$
- $\mathcal{M} \not\models \phi \Rightarrow \mathcal{M} \models \neg\phi$ if $\mathcal{M}$ has only one initial state

The CTL model checking problem $\mathcal{M} \models \phi$

The CTL model checking problem $\mathcal{M} \models \phi$

$\mathcal{M}, s \models \phi$ for every initial state $s \in I$ of the Kripke structure

Important Remark

$\mathcal{M} \not\models \phi \not\Rightarrow \mathcal{M} \models \neg\phi$ (!!)

- E.g. if ϕ is a universal formula **A**... and two initial states s_0, s_1 are s.t. $\mathcal{M}, s_0 \models \phi$ and $\mathcal{M}, s_1 \not\models \phi$
- $\mathcal{M} \not\models \phi \Rightarrow \mathcal{M} \models \neg\phi$ if $\mathcal{M}$ has only one initial state

The CTL model checking problem $\mathcal{M} \models \phi$

The CTL model checking problem $\mathcal{M} \models \phi$

$\mathcal{M}, s \models \phi$ for every initial state $s \in I$ of the Kripke structure

Important Remark

$\mathcal{M} \not\models \phi \not\Rightarrow \mathcal{M} \models \neg\phi$ (!!)

- E.g. if ϕ is a universal formula **A**... and two initial states s_0, s_1 are s.t. $\mathcal{M}, s_0 \models \phi$ and $\mathcal{M}, s_1 \not\models \phi$
- $\mathcal{M} \not\models \phi \Rightarrow \mathcal{M} \models \neg\phi$ if $\mathcal{M}$ has only one initial state

The CTL model checking problem $\mathcal{M} \models \phi$

The CTL model checking problem $\mathcal{M} \models \phi$

$\mathcal{M}, s \models \phi$ for every initial state $s \in I$ of the Kripke structure

Important Remark

$\mathcal{M} \not\models \phi \not\Rightarrow \mathcal{M} \models \neg\phi$ (!!)

- E.g. if ϕ is a universal formula **A**... and two initial states s_0, s_1 are s.t. $\mathcal{M}, s_0 \models \phi$ and $\mathcal{M}, s_1 \not\models \phi$
- $\mathcal{M} \not\models \phi \Rightarrow \mathcal{M} \models \neg\phi$ if $\mathcal{M}$ has only one initial state

Example: $\mathcal{M} \not\models \phi \not\Rightarrow \mathcal{M} \models \neg\phi$

- $\mathcal{M} \not\models \mathbf{AG}p$, in fact:
 - $\mathcal{M}, s_1 \not\models \mathbf{AG}p$
(e.g., $\{s_1, \dots\}$ is a counter-example)
 - $\mathcal{M}, s_2 \models \mathbf{AG}p$
- $\mathcal{M} \not\models \neg\mathbf{AG}p$, in fact:
 - $\mathcal{M}, s_1 \models \neg\mathbf{AG}p$
(i.e., $\mathcal{M}, s_1 \models \mathbf{EF}\neg p$)
 - $\mathcal{M}, s_2 \not\models \neg\mathbf{AG}p$
(i.e., $\mathcal{M}, s_2 \not\models \mathbf{EF}\neg p$)

Syntactic properties of CTL operators

$$\varphi_1 \vee \varphi_2 \iff \neg(\neg\varphi_1 \wedge \neg\varphi_2)$$

...

$$\mathbf{A}(\varphi_1 \mathbf{U} \varphi_2) \iff \neg \mathbf{E}(\neg\varphi_2 \mathbf{U} (\neg\varphi_1 \wedge \neg\varphi_2)) \wedge \neg \mathbf{EG} \neg\varphi_2$$

$$\mathbf{EF} \varphi_1 \iff \mathbf{E}(\top \mathbf{U} \varphi_1)$$

$$\mathbf{AG} \varphi_1 \iff \neg \mathbf{EF} \neg\varphi_1$$

$$\mathbf{AF} \varphi_1 \iff \neg \mathbf{EG} \neg\varphi_1$$

$$\mathbf{AX} \varphi_1 \iff \neg \mathbf{EX} \neg\varphi_1$$

Note

CTL can be defined in terms of $\wedge$, $\neg$, **EX**, **EG**, **EU** only

Exercise:

prove that $\mathbf{A}(\varphi_1 \mathbf{U} \varphi_2) \iff \neg \mathbf{EG} \neg\varphi_2 \wedge \neg \mathbf{E}(\neg\varphi_2 \mathbf{U} (\neg\varphi_1 \wedge \neg\varphi_2))$

Syntactic properties of CTL operators

$$\varphi_1 \vee \varphi_2 \iff \neg(\neg\varphi_1 \wedge \neg\varphi_2)$$

...

$$\mathbf{A}(\varphi_1 \mathbf{U} \varphi_2) \iff \neg \mathbf{E}(\neg\varphi_2 \mathbf{U} (\neg\varphi_1 \wedge \neg\varphi_2)) \wedge \neg \mathbf{EG} \neg\varphi_2$$

$$\mathbf{EF} \varphi_1 \iff \mathbf{E}(\mathbf{T} \mathbf{U} \varphi_1)$$

$$\mathbf{AG} \varphi_1 \iff \neg \mathbf{EF} \neg\varphi_1$$

$$\mathbf{AF} \varphi_1 \iff \neg \mathbf{EG} \neg\varphi_1$$

$$\mathbf{AX} \varphi_1 \iff \neg \mathbf{EX} \neg\varphi_1$$

Note

CTL can be defined in terms of $\wedge$, $\neg$, **EX**, **EG**, **EU** only

Exercise:

prove that $\mathbf{A}(\varphi_1 \mathbf{U} \varphi_2) \iff \neg \mathbf{EG} \neg\varphi_2 \wedge \neg \mathbf{E}(\neg\varphi_2 \mathbf{U} (\neg\varphi_1 \wedge \neg\varphi_2))$

Syntactic properties of CTL operators

$$\varphi_1 \vee \varphi_2 \iff \neg(\neg\varphi_1 \wedge \neg\varphi_2)$$

...

$$\mathbf{A}(\varphi_1 \mathbf{U} \varphi_2) \iff \neg \mathbf{E}(\neg\varphi_2 \mathbf{U} (\neg\varphi_1 \wedge \neg\varphi_2)) \wedge \neg \mathbf{EG} \neg\varphi_2$$

$$\mathbf{EF} \varphi_1 \iff \mathbf{E}(\mathbf{T} \mathbf{U} \varphi_1)$$

$$\mathbf{AG} \varphi_1 \iff \neg \mathbf{EF} \neg\varphi_1$$

$$\mathbf{AF} \varphi_1 \iff \neg \mathbf{EG} \neg\varphi_1$$

$$\mathbf{AX} \varphi_1 \iff \neg \mathbf{EX} \neg\varphi_1$$

Note

CTL can be defined in terms of $\wedge$, $\neg$, **EX**, **EG**, **EU** only

Exercise:

prove that $\mathbf{A}(\varphi_1 \mathbf{U} \varphi_2) \iff \neg \mathbf{EG} \neg\varphi_2 \wedge \neg \mathbf{E}(\neg\varphi_2 \mathbf{U} (\neg\varphi_1 \wedge \neg\varphi_2))$

Strength of CTL operators

- $A[OP]\varphi \models E[OP]\varphi$, s.t. $[OP] \in \{X, F, G, U\}$
- $AG\varphi \models \varphi \models AF\varphi$, $EG\varphi \models \varphi \models EF\varphi$
- $AG\varphi \models AX\varphi \models AF\varphi$, $EG\varphi \models EX\varphi \models EF\varphi$
- $AG\varphi \models AX\dots AX\varphi \models AF\varphi$, $EG\varphi \models EX\dots EX\varphi \models EF\varphi$
- $A(\varphi U \psi) \models AF\psi$, $E(\varphi U \psi) \models EF\psi$

CTL tableaux rules

- Let φ_1 and φ_2 be CTL formulae:

$$\begin{aligned}\mathbf{AF}\varphi_1 &\iff (\varphi_1 \vee \mathbf{AXAF}\varphi_1) \\ \mathbf{AG}\varphi_1 &\iff (\varphi_1 \wedge \mathbf{AXAG}\varphi_1) \\ \mathbf{A}(\varphi_1 \mathbf{U}\varphi_2) &\iff (\varphi_2 \vee (\varphi_1 \wedge \mathbf{AXA}(\varphi_1 \mathbf{U}\varphi_2))) \\ \mathbf{EF}\varphi_1 &\iff (\varphi_1 \vee \mathbf{EXEF}\varphi_1) \\ \mathbf{EG}\varphi_1 &\iff (\varphi_1 \wedge \mathbf{EXEG}\varphi_1) \\ \mathbf{E}(\varphi_1 \mathbf{U}\varphi_2) &\iff (\varphi_2 \vee (\varphi_1 \wedge \mathbf{EXE}(\varphi_1 \mathbf{U}\varphi_2)))\end{aligned}$$

- Recursive definitions of **AF**, **AG**, **AU**, **EF**, **EG**, **EU**.
- If applied to all top-level temporal subformulas in φ , rewrite φ into a Boolean combination of atomic, **AX**- and **EX**-formulas:

$$\mathbf{A}(p\mathbf{U}q) \wedge (\mathbf{EG}\neg p) \implies (q \vee (p \wedge \mathbf{AXA}(p\mathbf{U}q))) \wedge (\neg p \wedge \mathbf{EXEG}\neg p)$$

- atomic subformulas: what holds in current state
- AX**- and **EX**-subformulas: obligations for next states

Tableaux Rules: a Quote

*"After all... tomorrow is another day."

Example 1: mutual exclusion (safety)

$$M \models \mathbf{AG} \neg (C_1 \wedge C_2) ?$$

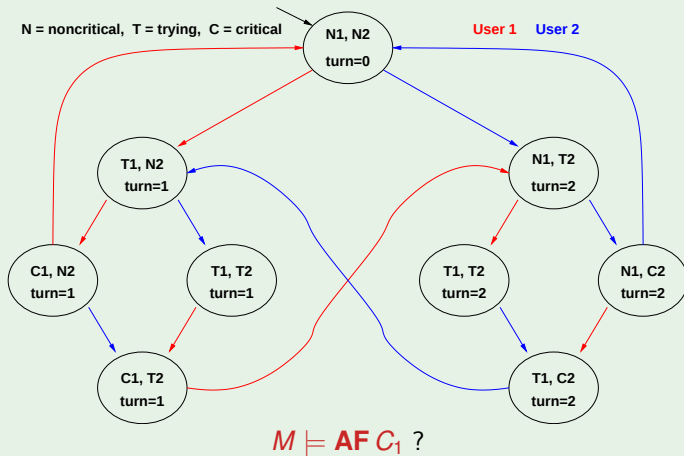

Example 1: mutual exclusion (safety)

$$M \models \mathbf{AG} \neg (C_1 \wedge C_2) ?$$

YES: There is no reachable state in which $(C_1 \wedge C_2)$ holds!
(Same as the $\mathbf{G} \neg (C_1 \wedge C_2)$ in LTL.)

Example 2: liveness

Example 2: liveness

$M \models \text{AF } C_1 ?$

No: there is an infinite cyclic solution in which C_1 never holds!
(Same as FC_1 in LTL.)

Example 3: liveness

$M \models \mathbf{AG}(T_1 \rightarrow \mathbf{AF} C_1) ?$

Example 3: liveness

$$M \models \mathbf{AG}(T_1 \rightarrow \mathbf{AF} C_1) ?$$

YES: every path starting from each state where T_1 holds passes through a state where C_1 holds
(Same as $\mathbf{G}(T_1 \rightarrow \mathbf{FC}_1)$ in LTL.)

Example 4: fairness

$M \models \text{AGAF}C_1 ?$

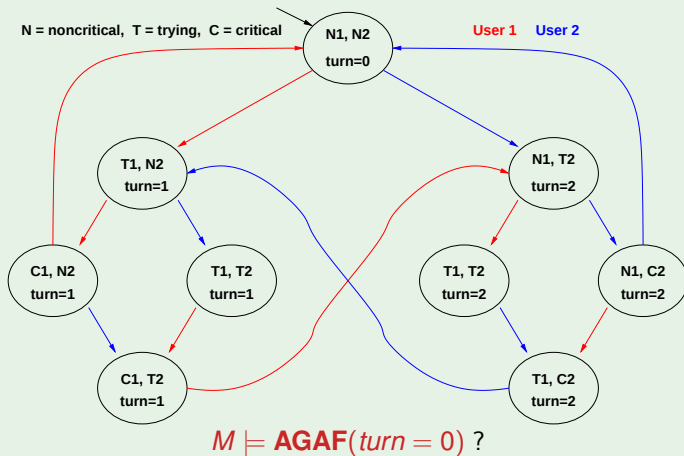

Example 4: fairness

$M \models \text{AGAF}C_1$?

NO: e.g., in the initial state, there is an infinite cyclic solution in which C_1 never holds!
(Same as GFC_1 in LTL.)

Example 5: fairness (2)

Example 5: fairness (2)

$M \models \mathbf{AGAF}(\text{turn} = 0) ?$

NO: there is an infinite 8-shaped cyclic solution in which ($\text{turn} = 0$) never holds!

Example 6: blocking

$M \models \mathbf{AG}(N_1 \rightarrow \mathbf{EF} T_1) ?$

Example 6: blocking

$$M \models \mathbf{AG}(N_1 \rightarrow \mathbf{EF} T_1) ?$$

YES: from each state where N_1 holds there is a path leading to a state where T_1 holds
(No corresponding LTL formula.)

Example 7: blocking (2)

$M \models \mathbf{AG}(N_1 \rightarrow \mathbf{AF} T_1) ?$

Example 7: blocking (2)

$$M \models \mathbf{AG}(N_1 \rightarrow \mathbf{AF} T_1) ?$$

NO: e.g., in the initial state, there is an infinite cyclic solution in which N_1 holds and T_1 never holds!

(Same as LTL formula $\mathbf{G}(N_1 \rightarrow \mathbf{F} T_1)$.)

Example 8:

Example 8:

$M \models \text{EGN}_1 ?$

YES: there is an infinite cyclic solution where N_1 always holds
(No corresponding LTL formula.)

Example 9:

$M \models \text{AFEGN}_1 ?$

Example 9:

$M \models \text{AFEGN}_1$?

YES: there is an infinite cyclic solution where N_1 always holds, and from every state you necessarily reach one state of such cycle
(No corresponding LTL formula.)

LTL vs. CTL: expressiveness

- Many CTL formulas cannot be expressed in LTL
(e.g., those containing existentially quantified subformulas)
E.g., $\mathbf{AG}(N_1 \rightarrow \mathbf{EFT}_1)$, $\mathbf{AFAG}\varphi$
- Many LTL formulas cannot be expressed in CTL
(e.g. fairness LTL formulas)
E.g., $\mathbf{GFT}_1 \rightarrow \mathbf{GFC}_1$, $\mathbf{FG}\varphi$
- Some formulas can be expressed both in LTL and in CTL (typically LTL formulas with operators of nesting depth 1, and/or with operators occurring positively)
E.g., $\mathbf{G}\neg(C_1 \wedge C_2)$, $\mathbf{FC}_1$, $\mathbf{G}(T_1 \rightarrow \mathbf{FC}_1)$, $\mathbf{GFC}_1$

LTL vs. CTL: expressiveness

- Many CTL formulas cannot be expressed in LTL
(e.g., those containing existentially quantified subformulas)

E.g., $\mathbf{G}\neg(C_1 \wedge C_2)$, $\mathbf{FC}_1$, $\mathbf{G}(T_1 \rightarrow \mathbf{FC}_1)$, $\mathbf{GFC}_1$

Example: $AFAGp$ vs. FGp

(Example developed by the students Andrea Mattioli and Mirko Boniatti, 2005.)

$$\text{AFAGp} \neq \text{FGp}$$

Example:

Kripke model $\dashrightarrow$ Infinite tree

AFAGp = false

There is no state in the yellow path from which finally p holds globally.

FGp = true

LTL vs. CTL: M.C. Algorithms

- LTL M.C. problems are typically handled with **automata- based M.C.** approaches (Wolper & Vardi)
- CTL M.C. problems are typically handled with **symbolic M.C.** approaches (Clarke & McMillan)
- LTL M.C. problems can be reduced to CTL M.C. problems under **fairness constraints** (Clarke et al.)

LTL vs. CTL: M.C. Algorithms

- LTL M.C. problems are typically handled with **automata- based M.C.** approaches (Wolper & Vardi)
- CTL M.C. problems are typically handled with **symbolic M.C.** approaches (Clarke & McMillan)
- LTL M.C. problems can be reduced to CTL M.C. problems under **fairness constraints** (Clarke et al.)

- CTL M.C. problems are typically handled with **symbolic M.C.** approaches (Clarke & McMillan)
- LTL M.C. problems can be reduced to CTL M.C. problems under **fairness constraints** (Clarke et al.)

- Syntax: let p 's, φ 's, ψ 's being propositions, state formulae and path formulae respectively:
 - $p, \neg\varphi, \varphi_1 \wedge \varphi_2, \mathbf{A}\psi, \mathbf{E}\psi$ are **state formulae**
(properties of the set of paths starting from a state)
 - $\varphi, \neg\psi, \psi_1 \wedge \psi_2, \mathbf{X}\psi, \mathbf{G}\psi, \mathbf{F}\psi, \psi_1 \mathbf{U} \psi_2$ are **path formulae**
(properties of a path)
- Semantics: **A, E, X, G, F, U** as in CTL
 - **A, E**: quantify on paths (as in CTL)
 - **X, G, F, U**: (as in LTL)
 - as in CTL, but **X, G, F, U** not necessarily preceded by **A, E**

Remark

In principle in CTL* one may have sequences of nested path quantifiers.
In such case, the most internal one dominates:

$$M, s \models \mathbf{AE}\psi \text{ iff } M, s \models \mathbf{E}\psi, \quad M, s \models \mathbf{EA}\psi \text{ iff } M, s \models \mathbf{A}\psi.$$

- Syntax: let p 's, φ 's, ψ 's being propositions, state formulae and path formulae respectively:
 - $p, \neg\varphi, \varphi_1 \wedge \varphi_2, \mathbf{A}\psi, \mathbf{E}\psi$ are **state formulae**
(properties of the set of paths starting from a state)
 - $\varphi, \neg\psi, \psi_1 \wedge \psi_2, \mathbf{X}\psi, \mathbf{G}\psi, \mathbf{F}\psi, \psi_1 \mathbf{U}\psi_2$ are **path formulae**
(properties of a path)
- Semantics: **A, E, X, G, F, U** as in CTL
 - **A, E**: quantify on paths (as in CTL)
 - **X, G, F, U**: (as in LTL)
 - as in CTL, but **X, G, F, U** not necessarily preceded by **A, E**

Exercise: Products of Kripke Models

Consider the following two Kripke models $M1$ and $M2$, which share the variable x :

1. Compute and draw the graph of the asynchronous product of $M1$ and $M2$.
2. Compute and draw the graph of the synchronous product of $M1$ and $M2$.

Note: unreachable and deadend states should be removed.

Exercise: Products of Kripke Models (cont.)

1. Asynchronous product

1. Compute and draw the graph of the asynchronous product of $M1$ and $M2$.

[Solution:]

Exercise: Products of Kripke Models (cont.)

1. Asynchronous product

1. Compute and draw the graph of the asynchronous product of $M1$ and $M2$.

[Solution:]

2. Synchronous product

2. Compute and draw the graph of the synchronous product of $M1$ and $M2$.

[Solution:]

Exercise: LTL Model Checking (path)

Consider the following path π :

For each of the following facts, say if it is true or false in LTL.

- (a) $\pi, s_0 \models \mathbf{GF}q$
- (b) $\pi, s_0 \models \mathbf{FG}(q \leftrightarrow \neg p)$
- (c) $\pi, s_2 \models \mathbf{G}p$
- (d) $\pi, s_2 \models p\mathbf{U}q$

Exercise: LTL Model Checking (path)

Consider the following path π :

For each of the following facts, say if it is true or false in LTL.

- (a) $\pi, s_0 \models \mathbf{GF}q$
[Solution: true]
- (b) $\pi, s_0 \models \mathbf{FG}(q \leftrightarrow \neg p)$
- (c) $\pi, s_2 \models \mathbf{G}p$
- (d) $\pi, s_2 \models p\mathbf{U}q$

Exercise: LTL Model Checking (path)

Consider the following path π :

For each of the following facts, say if it is true or false in LTL.

- (a) $\pi, s_0 \models \mathbf{GF}q$
[Solution: true]
- (b) $\pi, s_0 \models \mathbf{FG}(q \leftrightarrow \neg p)$
[Solution: true]
- (c) $\pi, s_2 \models \mathbf{G}p$
- (d) $\pi, s_2 \models p\mathbf{U}q$

Exercise: LTL Model Checking (path)

Consider the following path π :

For each of the following facts, say if it is true or false in LTL.

- (a) $\pi, s_0 \models \mathbf{GF}q$
[Solution: true]
- (b) $\pi, s_0 \models \mathbf{FG}(q \leftrightarrow \neg p)$
[Solution: true]
- (c) $\pi, s_2 \models \mathbf{G}p$
[Solution: false]
- (d) $\pi, s_2 \models p\mathbf{U}q$

Exercise: LTL Model Checking (path)

Consider the following path π :

For each of the following facts, say if it is true or false in LTL.

- (a) $\pi, s_0 \models \mathbf{GF}q$
[Solution: true]
- (b) $\pi, s_0 \models \mathbf{FG}(q \leftrightarrow \neg p)$

- (c) $\pi, s_2 \models \mathbf{G}p$
[Solution: false]
- (d) $\pi, s_2 \models p\mathbf{U}q$
[Solution: true]

Ex: LTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in LTL.

- (a) $M \models (p\mathbf{U}q)$
- (b) $M \models \mathbf{G}(\neg p \rightarrow F\neg q)$
- (c) $M \models \mathbf{G}p \rightarrow \mathbf{G}q$
- (d) $M \models \mathbf{F}\mathbf{G}p$

Ex: LTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in LTL.

(a) $M \models (p\mathbf{U}q)$

[Solution: true]

(b) $M \models \mathbf{G}(\neg p \rightarrow F\neg q)$

(c) $M \models \mathbf{G}p \rightarrow \mathbf{G}q$

(d) $M \models \mathbf{F}\mathbf{G}p$

Ex: LTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in LTL.

- (a) $M \models (p\mathbf{U}q)$
[Solution: true]
- (b) $M \models \mathbf{G}(\neg p \rightarrow F\neg q)$
[Solution: true]
- (c) $M \models \mathbf{G}p \rightarrow \mathbf{G}q$
- (d) $M \models \mathbf{F}\mathbf{G}p$

Ex: LTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in LTL.

- (a) $M \models (p\mathbf{U}q)$
[Solution: true]
- (b) $M \models \mathbf{G}(\neg p \rightarrow F\neg q)$
[Solution: true]
- (c) $M \models \mathbf{G}p \rightarrow \mathbf{G}q$
[Solution: true]
- (d) $M \models \mathbf{F}\mathbf{G}p$

Ex: LTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in LTL.

- (a) $M \models (p\mathbf{U}q)$
[Solution: true]
- (b) $M \models \mathbf{G}(\neg p \rightarrow F\neg q)$
[Solution: true]
- (c) $M \models \mathbf{G}p \rightarrow \mathbf{G}q$
[Solution: true]
- (d) $M \models \mathbf{F}\mathbf{G}p$
[Solution: false]

Ex: CTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in CTL.

- (a) $M \models \mathbf{AF} \neg p$
- (b) $M \models \mathbf{EG} p$
- (c) $M \models \mathbf{A}(p \mathbf{U} q)$
- (d) $M \models \mathbf{E}(p \mathbf{U} \neg q)$

Ex: CTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in CTL.

- (a) $M \models \mathbf{AF} \neg p$
[Solution: false]
- (b) $M \models \mathbf{EG} p$
- (c) $M \models \mathbf{A}(p \mathbf{U} q)$
- (d) $M \models \mathbf{E}(p \mathbf{U} \neg q)$

Ex: CTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in CTL.

- (a) $M \models \mathbf{AF} \neg p$
[Solution: false]
- (b) $M \models \mathbf{EG} p$
[Solution: false]
- (c) $M \models \mathbf{A}(p \mathbf{U} q)$
- (d) $M \models \mathbf{E}(p \mathbf{U} \neg q)$

Ex: CTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in CTL.

- (a) $M \models \mathbf{AF} \neg p$
[Solution: false]
- (b) $M \models \mathbf{EG} p$
[Solution: false]
- (c) $M \models \mathbf{A}(p \mathbf{U} q)$
[Solution: true]
- (d) $M \models \mathbf{E}(p \mathbf{U} \neg q)$

Ex: CTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in CTL.

- (a) $M \models \mathbf{AF} \neg p$
[Solution: false]
- (b) $M \models \mathbf{EG} p$
[Solution: false]
- (c) $M \models \mathbf{A}(p \mathbf{U} q)$
[Solution: true]
- (d) $M \models \mathbf{E}(p \mathbf{U} \neg q)$
[Solution: true]

Ex: CTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in CTL.

- (a) $M \models \mathbf{AF} \neg q$
- (b) $M \models \mathbf{EG} q$
- (c) $M \models ((\mathbf{AGAF} p \vee \mathbf{AGAF} q) \wedge (\mathbf{AGAF} \neg p \vee \mathbf{AGAF} \neg q)) \rightarrow q$
- (d) $M \models \mathbf{AFEG}(p \wedge q)$

Ex: CTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in CTL.

(a) $M \models \mathbf{AF} \neg q$

[Solution: false]

(b) $M \models \mathbf{EG} q$

(c) $M \models ((\mathbf{AGAF} p \vee \mathbf{AGAF} q) \wedge (\mathbf{AGAF} \neg p \vee \mathbf{AGAF} \neg q)) \rightarrow q$

(d) $M \models \mathbf{AFEG}(p \wedge q)$

Ex: CTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in CTL.

- (a) $M \models \mathbf{AF} \neg q$
[Solution: false]
- (b) $M \models \mathbf{EG} q$
[Solution: false]
- (c) $M \models ((\mathbf{AGAF} p \vee \mathbf{AGAF} q) \wedge (\mathbf{AGAF} \neg p \vee \mathbf{AGAF} \neg q)) \rightarrow q$
- (d) $M \models \mathbf{AFEG}(p \wedge q)$

Ex: CTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in CTL.

- (a) $M \models \mathbf{AF} \neg q$
[Solution: false]
- (b) $M \models \mathbf{EG} q$
[Solution: false]
- (c) $M \models ((\mathbf{AGAF} p \vee \mathbf{AGAF} q) \wedge (\mathbf{AGAF} \neg p \vee \mathbf{AGAF} \neg q)) \rightarrow q$
[Solution: true]
- (d) $M \models \mathbf{AFEG}(p \wedge q)$

Ex: CTL Model Checking

Consider the following Kripke Model M :

For each of the following facts, say if it is true or false in CTL.

- (a) $M \models \mathbf{AF} \neg q$
[Solution: false]
- (b) $M \models \mathbf{EG} q$
[Solution: false]
- (c) $M \models ((\mathbf{AGAF} p \vee \mathbf{AGAF} q) \wedge (\mathbf{AGAF} \neg p \vee \mathbf{AGAF} \neg q)) \rightarrow q$
[Solution: true]
- (d) $M \models \mathbf{AFEG}(p \wedge q)$
[Solution: false]
