1 Question

Let A, B be two sets. Prove that the properties below are equivalent.

- $A = \emptyset \vee B = \emptyset$
- $A \times B = \emptyset$

1.1 Answer

The Result of the cartesian product between 2 empty sets is empty because cannot be formed order pair,

for e.g:

- $A \times B = \{\emptyset \{\emptyset\}\} = \emptyset$; according with the definition of cartesian product which states $A \times B = \{< a, b >| a \epsilon A \wedge b \epsilon B\}$
- $a \notin A \wedge b \notin B = \emptyset \Longleftrightarrow \neg(a \in A) \wedge \neg(b \in B) = \emptyset$

  $\neg\exists a(a \in A) \wedge \neg\exists b(b \in B) = \emptyset$

2 Preliminaries

Given an infinite sequence of sets $(A_i)_{i \in \mathbb{N}}$, we define $\bigcup_{i=0}^{\infty} A_i = \bigcup\{A_i \mid i \in \mathbb{N}\}$ and $\bigcup_{i=0}^{k} A_i = \bigcup\{A_i \mid i \in \mathbb{N} \ \wedge \ i \leq k\} = A_0 \cup A_1 \cup \cdots \cup A_k$.

3 Question

Assume $(A_i)_{i \in \mathbb{N}}$ to be an infinite sequence of sets of natural numbers, satisfying

$$A_0 \subseteq A_1 \subseteq A_2 \subseteq A_3 \cdots \subseteq \mathbb{N} \ (*)$$

For each property p_i shown below, state whether

- the hypothesis $(*)$ is sufficient to conclude that p_i holds; or
- the hypothesis $(*)$ is sufficient to conclude that p_i does not hold; or
- the hypothesis $(*)$ is not sufficient to conclude anything about the truth of p_i.

Justify your answers (briefly).

1. p_1: $\forall k \in \mathbb{N}.\ A_k = \bigcup_{i=0}^{k} A_i$
2. p_2: for all i, if A_i is infinite, then $A_i = A_{i+1}$
3. p_3: if $\forall i \in \mathbb{N}.\ A_i \neq A_{i+1}$, then $\bigcup_{i=0}^{\infty} A_i = \mathbb{N}$
4. p_4: if $\forall i \in \mathbb{N}.\ A_i$ is finite, then $\bigcup_{i=0}^{\infty} A_i$ is finite
5. p_5: if $\forall i \in \mathbb{N}.\ A_i$ is finite, then $\bigcup_{i=0}^{\infty} A_i$ is infinite
6. p_6: if $\forall i \in \mathbb{N}.\ A_i$ is infinite, then $\bigcup_{i=0}^{\infty} A_i$ is infinite

3.1 Answer

1. $p_1 : \forall k \in \mathbb{N}. A_k = \bigcup_{i=0}^{k} A_i$- the hypothesis $(*)$ is sufficient to conclude that p_i holds;

- $A_k = \{0, 1, 2, ..., k\}$// this is a Set of sets.
- $A_i = \{x : \forall i \in A_k \, (x \leq k)\}$

2.
